

SMOOTH THAT LASTS™

Overview

The Cellfina™ System is the only FDA-cleared minimally invasive procedure clinically proven to improve the appearance of cellulite for at least two years—the longest FDA-cleared duration for a cellulite treatment. An outpatient procedure offered through a qualified physician, Cellfina™ combines a proven approach with innovative technology to treat the primary structural cause of cellulite. The result is a smooth look that gives patients the confidence to wear a bathing suit and higher hemlines.

Key benefits

- Long-lasting
- FDA-cleared
- One-time treatment
- Significant, rapid improvement
- Minimally invasive
- Effective and well-tolerated
- Limited downtime
- **96% patient satisfaction at two years**

How it works

The Cellfina™ System treats the primary structural cause of cellulite—the connective bands woven throughout fat in the thighs and buttocks. These tight bands pull down the skin, creating the puckering you see on the surface of the skin. Similar to a rubber band under tension, once released, the treated skin bounces back to smooth itself out.

Results

Patients in the pivotal study showed significant improvement within three days after the treatment. Two years after treatment, 100 percent of Cellfina™ patients had noticeable improvement on the Global Aesthetic Improvement Scale (GAIS). Results from Cellfina™ last at least two years—the longest FDA-cleared duration for a cellulite treatment.

Patient satisfaction

Cellfina™ patients report high rates of satisfaction with their treatment results. At three months, 85 percent of patients were satisfied, 94 percent at one year and 96 percent at two years, surpassing the patient satisfaction rates of other leading cellulite treatments.*

Side effects

No serious adverse events were associated with Cellfina™ in the pivotal study. The most common side effects reported by patients in the FDA-cleared pivotal study were soreness, tenderness and bruising. Just three days after treatment, patients rated their pain as minimal (2.7 on a scale of 0 to 10; 0=no pain, 10=extreme pain) and most (82 percent) felt pain only with touch or pressure to the area treated. This minimal pain improved quickly with time. More than 90 percent of patients had no bruising at four weeks.

Treatment cost

The Cellfina™ treatment is customized to each patient, so the best way to secure an accurate assessment is to consult with a physician. Find a doctor at Cellfina.com.

Treatment availability

The exciting, new Cellfina™ treatment is currently offered by a group of premier physicians. The treatment will become widely available across the U.S. in late-2015. Visit Cellfina.com to find a doctor.

Important Safety Information for Cellfina™

The Cellfina™ System is intended for long-term improvement in the appearance of cellulite in the buttocks and thigh areas of adult females. Safety and effectiveness in other anatomical areas have not been established. The most common side effects reported were soreness, tenderness, and bruising. The Cellfina™ System is only available through a licensed physician. For full product and safety information, visit Cellfina.com/IFU.
